# Matchstick multimedia arch based on firefox OS

Multimedia arch in Matchstick base on firefox OS

1. According to enhance stagefright extractor, Matchstick support mostly popular media formats, such as mp4, mov, flv, f4v, avi, 3gp, webm, mkv and so on.
2. Will go through stagefright when media file playback with video tag.
3. Matchstick has avc, VP8, mpeg2, m4v, h263 hardware decoder, VP9 only has software decoder.
4. WebM in MSE go through gecko's original multimedia engine.
5. FMP4 in MSE use gecko's demuxer, and use mediacodec for decoder.
6. Add HLS protocol support in stagefright, so video tag can playback .m3u8 urls.
7. Enable RTSP potocol support.
